PROFESSIONAL SUMMARY

Computer Science graduate with practical experience building AI/ML and software projects using Python, Java, and SQL. Built three working projects covering deep learning, computer vision, and backend systems from data pipeline to a usable interface. IBM-certified in Machine Learning with Python and Infosys-certified in Java, with working knowledge of manual testing and QA fundamentals.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, HTML5, CSS3

AI / ML: TensorFlow, Keras, OpenCV, CNN, Deep Learning, Real-Time Video Processing, Model Evaluation

Software Testing & QA: Manual Testing, Test Case Design, Functional Testing, Regression Testing, Bug Reporting & Tracking, UAT Support, STLC/SDLC

Databases: MySQL (Joins, Subqueries, CRUD, Query Optimization), Data Analysis, MS Excel (Pivot Tables, VLOOKUP)

Tools & Practices: Git, GitHub, Streamlit, REST API Concepts, OOP, SDLC, Agile/Scrum Basics, Debugging, Technical Documentation

PROJECTS

Image Tampering Detection - AI Web App *Python, TensorFlow/Keras, OpenCV, Streamlit, CNN*

- Built a web app that flags manipulated images using a CNN model, with a Streamlit front end so users can upload an image and see the result instantly.
- Split the backend into clear stages preprocessing, inference, output and tested it against a range of tampered and untampered images to identify edge cases and improve reliability.
- Kept the code modular and documented so each stage of the pipeline could be updated or reviewed independently, without touching the rest of the app.

Flight Booking System - Console Application *Java, OOP, File I/O, SDLC*

- Built a Java console app for flight booking registration, search, and booking management using OOP concepts like inheritance and encapsulation, with File I/O for saving data between runs.
- Manually tested each workflow end to end, documented defects, and fixed identified issues.
- Followed the SDLC through requirements, design, development, and debugging, keeping notes at each stage so the project was easy to explain and extend later.

Face Emotion Detection - Real-Time Deep Learning *Python, TensorFlow/Keras, OpenCV, CNN*

- Built a CNN model that reads emotions from live webcam video in real time, recognizing 7 different emotions using OpenCV for face detection and frame capture.
- Tested it under different lighting conditions and viewing angles, then adjusted preprocessing to improve reliability.
- Structured the code into separate capture, preprocessing, prediction, and display steps, so each part could be debugged or swapped out on its own.

CERTIFICATIONS

- Machine Learning with Python - IBM
- Java Foundation Certification - Infosys Springboard

ACHIEVEMENTS

- **Hack4Purpose 2024 (National Hackathon)** - worked in a 4-person team to build a sustainability-focused solution in a sprint format, handled problem analysis and prototype delivery.
- **She Codes (App Dev Hackathon)** - built a user-facing app solution as part of the event, focused on solving a real-world problem.

EDUCATION

B.Tech - Computer Science & Engineering

Kalasalingam Academy of Research and Education 2022 – 2026 | CGPA: 7.88

Higher Secondary (12th)

Narayana Girls Junior College 2020 – 2022 | CGPA: 7.33
